Topics

- Overview of recent developments in infrastructure law and construction/engineering contracts for works, services and supply of goods.
- Emerging issues in construction, engineering, transport, energy, water, real estate, PPP, mining, port and maritime infrastructure projects and contracts.
- Managing contracts in environments characterised by late payments, suspension and uncertain completion times.
- Overview of the new FIDIC contracts and new NEC4 family of contracts.
- Setting up and administering modern forms of contracts and contracting strategies in the construction industry (framework contracts, partnering arrangements, target cost contracts, management contracting)
- Role of the client in governance and leadership of construction projects.
- Overview of the new China-Africa Joint Arbitration Centre (CAJAC) initiative and its implications for dispute resolution of Sino-African infrastructure construction projects.

Organised by the West Africa Built Environment Research Conference & supported by our Partners
